

A Focus on Teaching: Paperwork Reduction, Technology and the Impact on Teachers

D2K: Data to Knowledge is a multi-year multi-dimension research project focused on improving the quality of education for students with disabilities by reducing special education paperwork for teachers. There are three strands to the 2006-2007 projects. 1. Reducing paperwork by understanding teacher use of time. 2. Reducing paperwork through electronic, web-based progress monitoring in science. 3. Reducing paperwork through electronic, web-based daily behavior report cards.
